Qualified Products List: Important Info

Products listed on the QPL are pre-qualified for use on Maine Department of Transportation highway projects. The acceptance of the product occurs when the product is properly used in the field as determined by the appropriate engineer.

Unless noted otherwise in the specification or on the QPL, these products may be used on highway projects without further testing. Product placement on this list is not to be construed as an official endorsement by the State of Maine. Inclusion of a product on this list imply that the product meets any or all applicable local, state, or federal safety or environmental issues in effect at the time of use. The manufacturer/s Safety Data Sheet must be reviewed before and during the use of any product appearing on this list.

Products are often marketed as having multiple uses. Products appearing on the QPL are qualified for the category they appear under. Should a product be qualified for additional purposes, it will be listed under those appropriate categories.
Resources

- **AASHTO's Product Evaluation Listing (APEL)** - The American Association of State Highway and Transportation Officials (AASHTO), maintains a database of propriety products utilized in the transportation industry. Washington, DC and Puerto Rico contribute to the database from their experiences.

- **AASHTO's National Transportation Product Evaluation Program (NTPEP)** - The National Transportation Product Evaluation Program (NTPEP) was established in 1994 as an engineering technical service program to pool resources of AASHTO's member departments to test transportation materials of interest to the membership.

- **American Traffic Safety Services Association (ATSSA)** - Since 1969, ATSSA has been a leader in the traffic control and roadway safety industry. Over 1,600 ATSSA members provide products and services used to make our nation’s roadways safer. These include pavement marking devices, guardrail, and other roadside safety features.

- **NTPEP DataMine** - NTPEP DataMine is the online repository of data and audit reports. It provides the tools for performing queries that will assist you in analyzing and reporting evaluations. The application allows NTPEP Testing Facilities and Auditors to enter data and the NTPEP administration may review product information and perform analyses of all evaluations.

Field Evaluations

No more guess work
Organized product trial
Monitoring
Documentation

“I think we tried that back in ‘82 but I can’t remember how well it performed?”
But it meets the specs…

The specifications are only part of what our committees look at when evaluating a product.
