Hi I'm Jennie Buskin. I'm a student in the ETEP program. I'm becoming certified to teach 7-12 mathematics but I also hope to be certified to teach science in the upcoming year. Though I'd like to speak today mostly from a point on my background in special education and working with middle schoolers and high schoolers in a special purpose school. Um I support the adaptation of the science standards. I think they offer more entry points especially for students in special education um to an engaging curriculum that prepares them for the skills they need to be successful. Thank you
