Maine Influenza Surveillance: 2019-20 season
Monthly Summer Update
August 4, 2020

For MMWR weeks 28-31 (ending 08/01/2020):

# Total new influenza cases: 2
# New novel influenza A cases: 0
Most common circulating virus: influenza A and B

Laboratory results- Maine, 2019-2020 season

# samples tested at HETL (weeks 28-31): 4
  # positive: 0
  % positive: 0
# of reported positive samples (weeks 28-31): 2
  PCR: 2
  Rapid*: 0
Total # of positive samples (2019-20 season, through week 31): 10,223

*During the off-season, rapid test results can be inaccurate. Maine CDC requests providers send specimens to HETL for PCR confirmation.

Novel influenza A surveillance- 2019-20 season

Novel influenza A virus infections include all human infections with influenza A viruses that are different from circulating human seasonal influenza H1 and H3 viruses. Novel influenza A viruses include viruses that normally circulate in swine and are denoted by adding the letter “v” to the end of the virus subtype. In Maine, novel influenza viruses can only be detected through testing at Maine Health and Environmental Testing Laboratory (HETL).

Cases reported during the 2019-20 season:
